HRIH Investments Mining Statement

Final History from August 2018 until 9 January 2019

19/01/09 Company Registration Number 2015 / 036585 / 07

These products had been developed in consultation with the FSCA, South Africa. They are legally within the framework of SARB's whitepaper on cryptocurrency businesses. We have tested all products and guarantee 100% operability and functionality. We ensure that all risks had been assessed and counter acted, though risks still exist in the products due to market volatility. We can not influence asset / market performance. Do not invest money that you can not afford to lose.

HRIH Investments | <http://hrihinvestments.org.za> 1

Financial Statement

Dear Clients,

The past year has been very rough and to be honest not profitable at all. For 9 consecutive months we have shown no profit from the initial investments everyone, including us, the company has made. This way due to a falling Bitcoin price, rising mining difficulty and high maintenance fees of the equipment we used on the old system.

We were forced to relook the entire business operation and invested funds to acquire our own blockchain, mining nodes, wallet, applications and consultation from various sources. We spent much of the unprofitable period negotiating with our service deliverer to reconsider their maintenance fees which was the main reason for no returns at all. You will see from the global company earnings that daily earnings from the three mining pools we used, BTC, AntPool and F2, that the maintenance were consistently higher than the earnings. Currently the system is still active, yet no improvement has been seen thus far.

We have subsequently released our own tokens and begun negotiating with various businesses. We are soon to be listed on Liqnet and will be featured on Cointelegraph as well. Our business will be undergoing restructuring with the assistance of SEDA and we plan to acquire funding from the

Financial Statement

NEF with the help of SEDA as well.

The FSCA has played a huge role in the design of the new products and services and is still giving us advice as we are building securities to operate on the new platform as soon as the developers are done with their customisation work. We are looking forward to partner with more businesses and will inform you of these deals as they go through. This will be a very good year though as we will not be liable for any maintenance fees on the new system as we own the technology ourselves. We will be marketing the business with help of SEDA and with the funding we will be receiving expand our infrastructure and operation. We will also be operating with an FSP licence and will later be obtaining a banking licence from the SARB for the second phase of the project.

Should you be interested you can purchase tokens from the company via the website. We have also repetitively requested clients to open new accounts on the new platforms as no one has responded our request to do that. We were forced to use a new platform as the old database was giving problems and we also received a lot of complaints from clients. We had no choice but to use a new system.

We have sent tokens to all clients and ask that you keep them. We are listing them on various exchanges and urge you not to try to sell them yet, as

we need to finalise all deals before that can be done.

If you have any queries about the statement or the project, please contact us and post your query. We estimate to be fully operation with the new platform somewhere from March to June this year, it may be earlier based on our work with SEDA.

Below follows the financial statement of all earnings from the mining operation. All clients' capital are in this statement.

These products had been developed in consultation with the FSCA, South Africa. They are legally within the framework of SARB's whitepaper on cryptocurrency businesses. We have tested all products and guarantee 100% operability and functionality. We ensure that all risks had been assessed and counter acted, though risks still exist in the products due to market volatility. We can not influence asset / market performance. Do not invest money that you can not afford to lose.

Financial Statement
